2100 ELECTROMAGNETIC DOOR HOLDER, 180°, WALL MOUNT

- 1. Measure distance from pivot centerline to Magnet Box centerline (Dim. "A").
- 2. Determine door width (Dim. "B").
- 3. Use table below to locate magnet box centerline on wall .
 - a. Example : Dim. "B" = 36" Result Dim. "A" = 33-5/16".
 - b. If Dim. "B" falls between dimensions listed in the table below, allow for difference.

Example : Dim. "B" = 40" Then Dim. "A" = 37-5/16 ".

- 4. Suggested vertical location is on top rail approximately 5" from top of the door.
- 5. Check degree of door opening and coordinate with door closer and other door hardware.
- 6. Total projection of door hardware must not be more than 3-5/8" on the pull side of door. If greater, you will need to use additional extensions, sold separately

	DIM. "B" (NOM. DOOR WIDTH) - 180°						
	24"	28"	30"	32	36	42	48
DIM "A"	21-5/16"	25-5/16"	27-5/16"	29-5/16"	33-5/16"	39-5/16"	45-5/16"

- 7. From centerline of pivot, measure the appropriate Dim. "A" in step 3.
- 8. Proper electrical wire routing must be done before installing magnet box.
- 9. The 4" X 2-1/8" X 2" outlet box (not provided with unit) should be installed with reinforcement to withstand a minimum 50lb. pull.

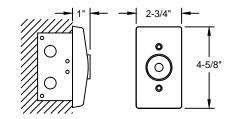

IMPORTANT: Check that power voltage equals voltage labeled on back of magnet. Refer " ELECTRICAL DATA" on page 1.

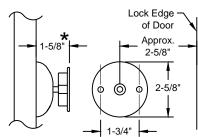

DOOR ARMATURE INSTALLATION:

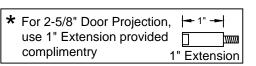

- 1. Place and center the door armature on the surface of the magnet with the two holes of the base aligned horizontally.
- 2. Gently close the door and adjust the angle of the door armature so the base lays flat against the door.
- 3. While keeping slight pressure on the door, mark location of door armature through the two base holes.
- 4. Drill through the door where the two marks are located with 5/16" drill. Fasten with the (2)10-32 machine screws & sex bolts provided.

NOTE: 1. All dimensions are provided in inches, unless noted otherwise.

2. Additional extensions can be ordered separately to increase the door armature projection: 3/8", 1/2", 3/4", 1", 2", 4" or 6".
