All-in-One Network Communication & Security

IS Series

Easy to learn. Easy to use.

The IS Series is the perfect communication system for today's security needs. Multiple features are rolled into one system, saving time and money on installation and training costs.

The image displays several components of the IS Series communication system. A central monitor shows a video feed of a group of people. To its left is a handset/master station with a keypad and a small screen. To its right is another handset/master station with a larger 3.5-inch LCD screen. In the foreground, there are two door stations: one with a 170-degree camera lens and another with a card reader slot. A PC monitor in the background shows a graphical interface for the software. A blue Ethernet cable is also visible.

PC Software
Virtual master station with intuitive graphical interface

Door Stations
Speaker & microphone for hands-free communication

Handset / Hands-free Room Station
Communicate back & forth between rooms and masters

Handset / Hands-free Master Station
3.5" LCD screen for clear visitor identification

Handset / Hands-free Master Station
One button door release to quickly unlock entrances

Door Station
Button notifies master station of call from door station

Door Station
170° camera to see more of the entry area

Handset / Hands-free Master Station
PTZ camera control for greater detail

Door Station with Card Readers
Preserve building aesthetics by using just one unit

Centralize control. Save money.

Control multiple functions from any facility. For instance, when one building closes for the night, manage security from another location. Save on operation costs and expenses by centralizing your security using the IS Series.

Identify Visitors and Unlock Doors

Once visitor identity is established, unlock doors or gates from anywhere on the network.

Internal Communication

Communicate easily between stations on the network, from within a building, or from across town.

Emergency Broadcasts

Create areas and zones to easily broadcast emergency announcements quickly.

Schedule Bells & Announcements

Program announcements by day, week, or month. Create different schedules for holidays, breaks, or after hours.

Forward Missed Calls Automatically

If a master station does not answer, have the call forwarded to another master as well as to an outside phone number, like 911.

Start Small, Grow Large

IP Boxed Sets are a great introduction to the IS Series. Each box contains an IP addressable door station and either an IP addressable desktop master station or software master station. Easily expand by adding more boxed sets or by integrating with a hardwired IS System.

Building Solutions

Security control for your facility.

Communicate between stations.

Employees have several options when using the IS Series. They can speak with visitors at the door to verify identity, forward calls between master stations, and answer calls when other stations are not available.

Scale the System!

The IS Series is the perfect system for any building size. Configurations can be simple to accommodate 1 door station and 1 master station or can scale to a larger system to include stations around the world.

More than just an intercom.

Additional functions of the IS Series include overhead paging, room communication, emergency broadcasting, and rescue assistance.

Common Areas

PA System
Paging Speakers

Rooms, Exam Areas

Room Station
Handset/Hands-free

Emergency Areas, Stairwells

RA Station
in Wall Box or Tower

Go Wireless!

Connect IP Direct stations to a wireless link for mesh networking capabilities.

Zoom for clarity!

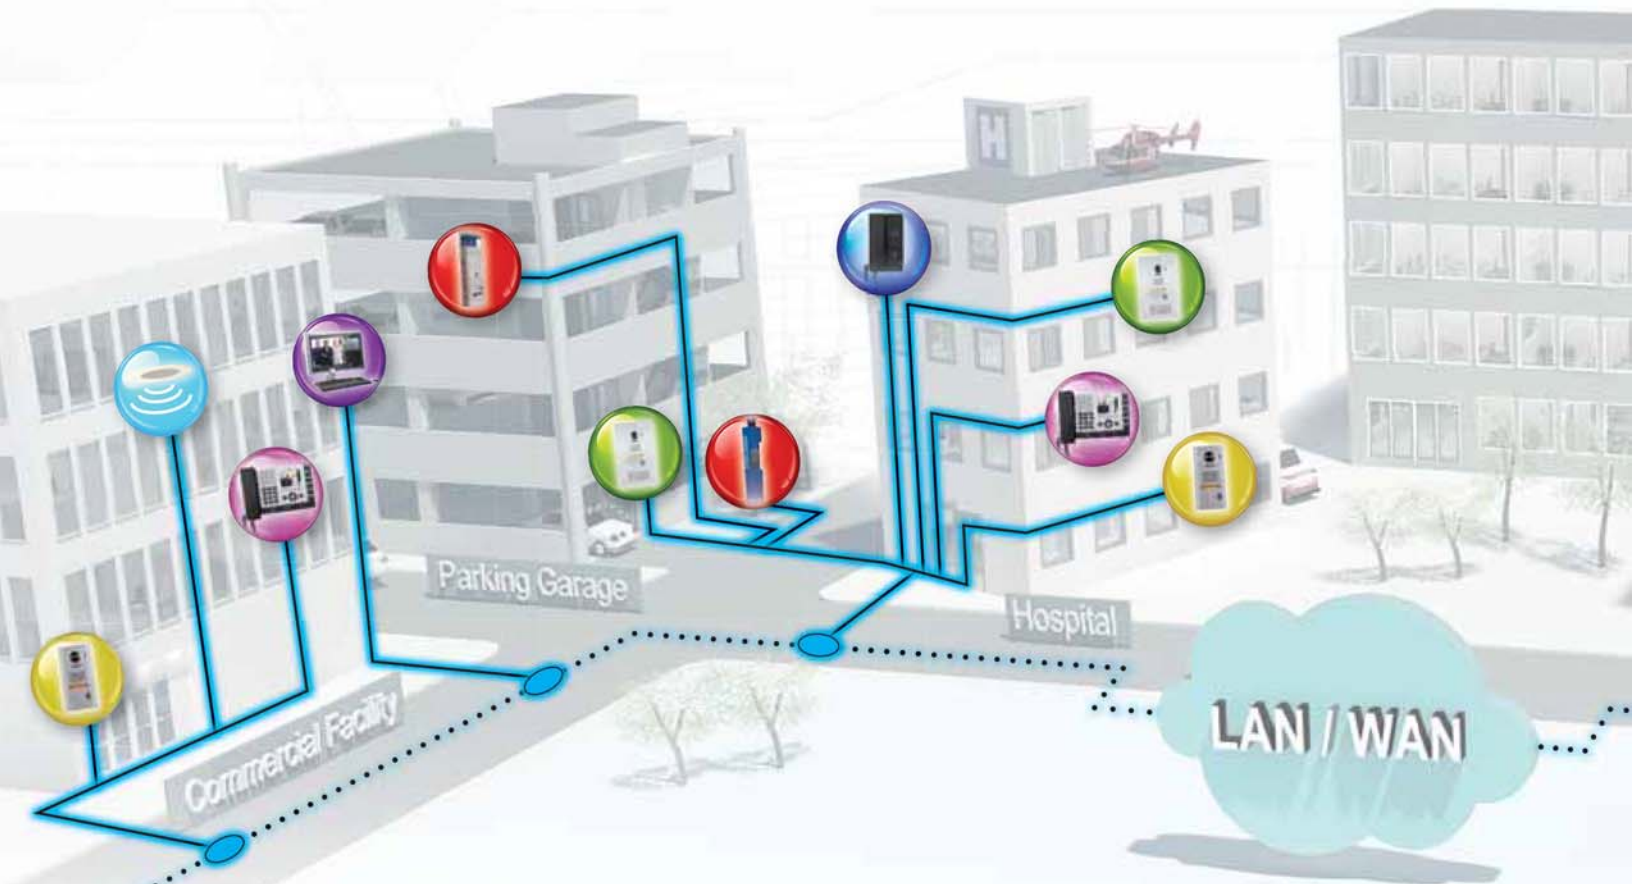

Digital Zoom with PanTilt control allows for clear identification.

Connect Your Buildings

Scale. Expand. Save.

Easily use existing network infrastructures and communicate between buildings. Global functions of the IS Series allow visitors at any entrance to be assisted from within the building or from across town. By using existing LAN/WAN, costs for installing the IS Series are lowered. Multiple buildings can be controlled from one main security location, saving on building operating expenses.

Door Stations

Entrances

Protect staff by giving them the advantage to safely confirm the identity of visitors and vendors before granting access into the building.

Master Stations

Offices

Assist visitors and communicate between offices using a standard or PC-based master station. Monitor locations during or after hours.

Subs & PA Systems

Rooms & Common Areas

Broadcast messages throughout the building or to a particular room or office with the choice of either a hands-free or handset reply.

Serverless Networking!

Use IP addressable stations that connect directly to a LAN/WAN or homerun hardwired stations to rack mountable central control units.

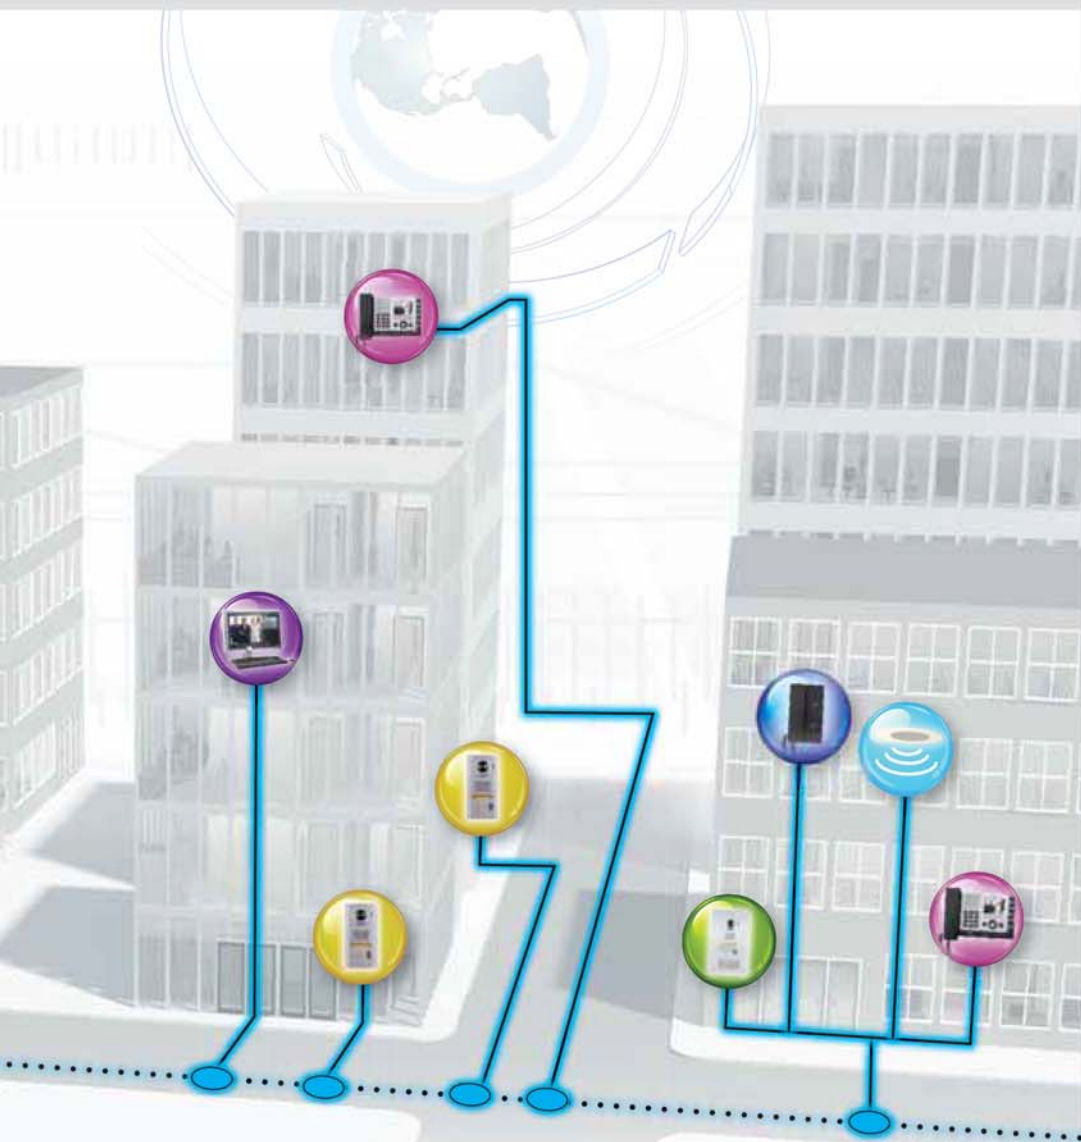

Event Driven Bandwidth!

While the IS Series is idle, minimal bandwidth is used, freeing up the network. Bandwidth usage will only increase during an event, like a door call-in.

Online System Settings!

All system functions, like bell scheduling or paging, can be controlled anywhere through a network browser, saving time and money during system updates.

Rescue Assistance Units

Open Areas

Provide campus wide peace of mind by installing assistance or emergency towers. Assess situations easily before dispatching personnel.

Stations + Card Readers

Parking Garages

Identify and communicate with individuals at remote locations to determine if their access into the building is legitimate.
