- ▶ Long-life 100,000-hour LED sources
- ▶ DeviceNet™ models available
- ▶ UL and cUL Listed
- ▶ PLC compatible
- ▶ NEMA Type 4X

**The new Chameleon 108 Series delivers multi-status audible and visual signaling in one compact solution.**

Edwards is revolutionizing signaling again! First came the 103 Series with three LED light sources, and flashing/ steady-on options - the new 108 Series builds on this advanced technology and adds eight tones for multi-status, multi-signaling applications.

Pick the model and super-bright LED color combination your visual application requires - red, amber and green OR red, amber and blue. Then select from eight unique, attention-getting tones.

Order the Chameleon 108-DN with a DeviceNet interface, and apply even greater functionality and control of each visual and audible indicator.

The Edwards 108 Series is as tough as it is versatile, with its shock-resistant and NEMA 4X housing. Plus, the Chameleon's 100,000-hour LED light sources just made changing bulbs a thing of the past.

*You can hear the Chameleon's eight tones on our **new** web site today at [www.edwards-signals.com](http://www.edwards-signals.com)*

The Chameleon Series continues to grow. First, the 103 series, a revolutionary single high-multi-status visual indicator. Now, the 108 Series, the world's first low-profile multi-status audible/visual signal - it's two signals in one.
