

HID Integrale™ Store and Forward

BENEFITS

- Administration through the web for transaction visibility and control of submission process
- Centralized storage of EFT files from one or more enrollment systems
- Ability to programmatically hold/release submission based on user defined workflows
- Validate received EFT files against agency or state specifications
- Automatically remove meta data from EFT files before submissions
- Edit biographic data for corrections before sending to destination

HID Global's Integrale Store and Forward is designed for organizations processing applicant fingerprint submissions from multiple capture systems. As a central repository for Electronic Fingerprint Transmission (EFT) records, the solution centralizes EFT records from distributed enrollment systems for transmission to receiving agencies or backend systems, such as FINRA, OPM, CAS, JABS, and SEC and is optimized for large-scale enrollment system installations.

The solution is specifically designed to receive, validate, prepare and forward biometric and biographic data. Integrale Store and Forward utilizes secure communication protocols, such as HTTPS/SSL, SFTP and/or S/MIME encrypted messaging from enrollment systems to external or agency endpoints.

Integrale Store and Forward can also be configured to hold some or all EFT files before forwarding. The records can then be examined or modified further prior to sending to the receiving agency or designated external system. Additionally, Integrale Store and Forward allows users to save digital fingerprint cards which conform to receiving agency standards and create customized transaction reports.

A scalable system that easily integrates into IT infrastructures—Integrale Store and Forward is the ideal solution for your organization. The integrated administration controls lend flexibility and security to a sensitive transmission process.

SPECIFICATIONS

Product Name

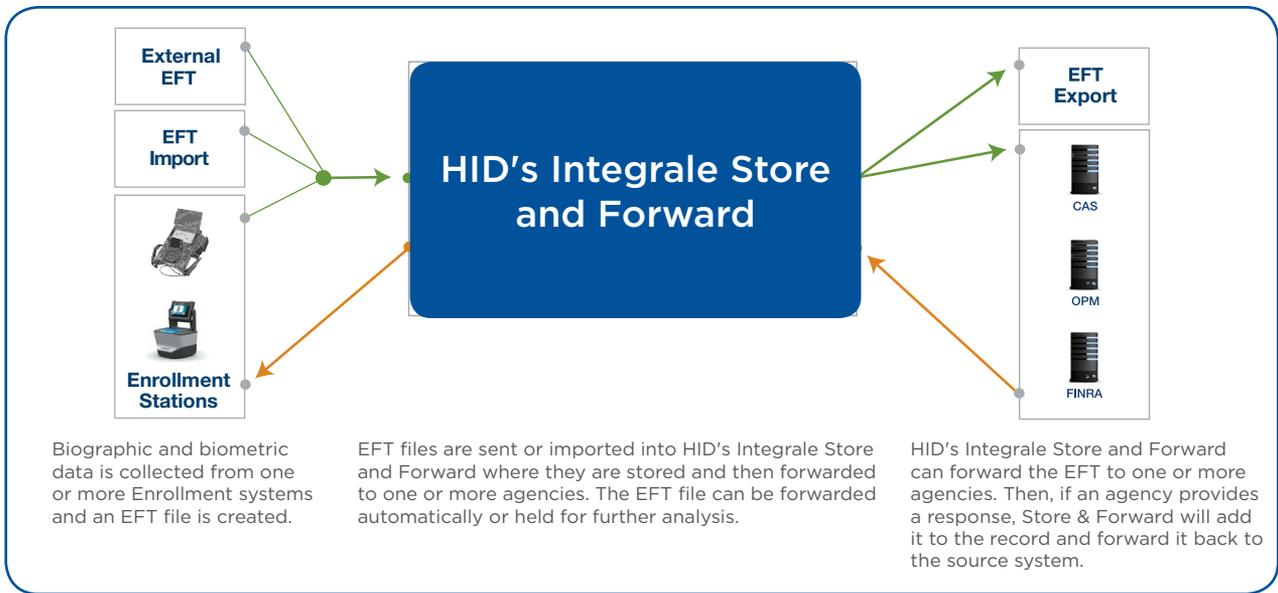

HID Integrale™ Store and Forward

Server SYSTEM Requirements

Windows® Server 2012 R2 or Windows® Server 2016
 SQL Server 2012, 2014 or 2016
 IIS (Internet Information Services) 7.5 or newer
 Active Directory® compatible (SSO)

Client BROWSER Requirements

Microsoft Internet Explorer® – Version 11 and EDGE
 Google Chrome® – Version 20 or higher
 Specification – HID Integrale Server must be a trusted site for the local domain or Internet policy
