- Temporary Time Lock (From now to required date and time, maximum of four (4) weeks)
- Time Lock Open Period Extension (Maximum two (2) hours in 30 minute increments)
- Daylight Saving Time

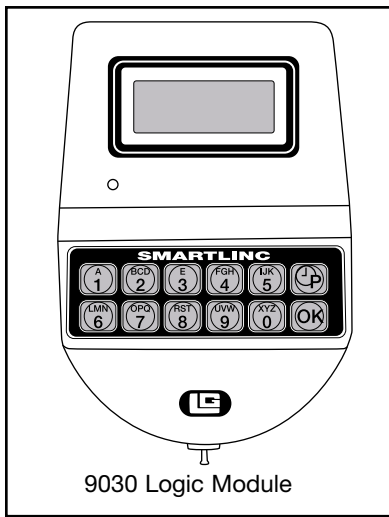

MULTIPLE LOCKS

The SMARTLINC Logic Module can manage up to five locks. This multiple lock system can be configured according your needs, whether it be inner compartment doors or multiple locks on the same safe.

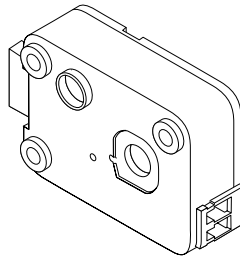

LOCK OPTIONS

The SMARTLINC can be used with a variety of locks from LA GARD's product line. The LA GARD electronic deadbolt was designed as an immediate replacement for mechanical locks. It can be used either to block safe boltwork or directly lock inner compartment doors. The Dual-Handed Swingbolt is the most popular high security lock for safes worldwide. It may be installed anywhere within the boltwork mechanism for direct blocking and allows automatic safe closing by simply turning the handle. Finally, only LA GARD can offer you the Redundant Mechanical Lock. The only lock of it's kind that provides the benefit of a completely redundant opening mechanism, one electronically controlled and the other mechanically controlled. The mechanical opening is controlled by a 4-wheel combination lock. **The Redundant Mechanical Lock is recommended for all high security safes rated TL15 or higher.**
