*Combination lock*

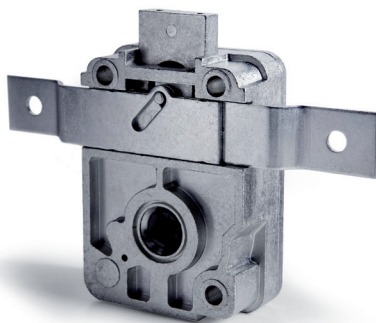

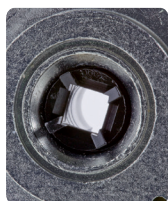

*Changeable key lock*

# Mechanical

## ***Mechanical combination lock***

- Manipulation resistant 3-wheel combination lock
- Square spindle
- The lock can be mounted in all four directions (RH, LH, VU, VD) without removing the back cover: the result is an easier and faster installation
- Unlike the threaded spindles that must be deburred after cutting, when the square shaft is cut to length, the cut-off points create a chamfered area: the chamfered area creates a positive location into the star washer then through the cam
- Smaller “forbidden zone” for the third number of the combination (0-10 in spite of 0-20)
- Wide range of dials available
- Optional auxiliary bolts for three-way locking
- Also available with standard threaded spindle
- Standard foot prints
- Certifications: VdS and UL

## ***Mechanical changeable key lock***

Manipulation resistant 4-wheel changeable key lock

Three different key lengths: 90mm, 125mm e 150mm

Standard foot prints

Certifications: VdS and UL
