

**SK-NET access control software,**  
on CD-ROM, with spiral-bound manual.

- SK-NET-DM** Basic software for use in a single, locally-connected Location. This version can be installed on a single PC running Windows Vista, 7 or XP. Allows one control panel to be connected by TCP/IP over a LAN or WAN or VPN. (Additional panels must be connected to the first panel using RS-485 communications).  
*(This version is also available for free download from [www.securakey.com](http://www.securakey.com)).*
- SK-NET-MLD** This version can manage an unlimited number of Locations. The PC can communicate with the Locations through local wiring, dial-up modem or multiple TCP/IP connections over a LAN, WAN or VPN. This version can be installed on a single PC running Windows Vista, 7 or XP. Version 5.0 now includes ID Badge printing capability.
- SK-NET-MLD-CS\_** The client/server version of SK-NET™ has all the capabilities of SK-NET-MLD, plus it can be installed on multiple workstations and the databases are shared on a common server. Order a 2, 5, 10 or 15 user license. Client/server versions also enable five password-protected levels of software access.

**RK-LINK software for standalone access control units**  
On CD-ROM, with instructions

- RK-LINK** A simple program designed for viewing transaction and programming users in RK600 and RK600e standalone access control units that have been equipped with RKAT option. Communicate with just one reader at a time. *(This software is provided with every RKAT and is available for free download from [www.securakey.com](http://www.securakey.com).)*

**NOTE:**

SK-EZ/ID is no longer available.  
SK-NET-MLD now includes ID Badge Printing capabilities.
